(714) 244-7818

STEP 1: DRAW THE SHAPE OF YOUR KITCHEN

Sketch a top-down view of your kitchen showing all walls. Don't worry about perfect ratios—just show the general layout (L-shape, U-shape, galley, peninsula etc.).

STEP 2: ADD DOORS, WINDOWS & OBSTACLES

Draw in any doors, windows, or other obstacles (vents, pipes, etc.) that might affect cabinet placement.

STEP 3: LABEL EACH WALL OR SECTION

Label each section or wall with letters (A, B, C...) so you can match your measurements to each area.

STEP 4: MEASURE YOUR WALLS

Use a tape measure or laser measurer to get the width and height of each wall.

- Measure from corner to corner.
- Measure floor to ceiling.
- Record the measurements by your labels (A, B, C...).

STEP 5: MEASURE DOORS, WINDOWS, & OBSTACLES

Measure the width and height of each door and window. Also measure appliances, vents, outlets—anything that could affect cabinet placement.

STEP 6: ADD APPLIANCES & ISLAND

Draw where your sink, stove, fridge, and island go on your sketch. Use letters to label them.

STEP 7: TAKE PICTURES

Take clear pictures of your kitchen from different angles and send them along with your sketch. This helps a lot!

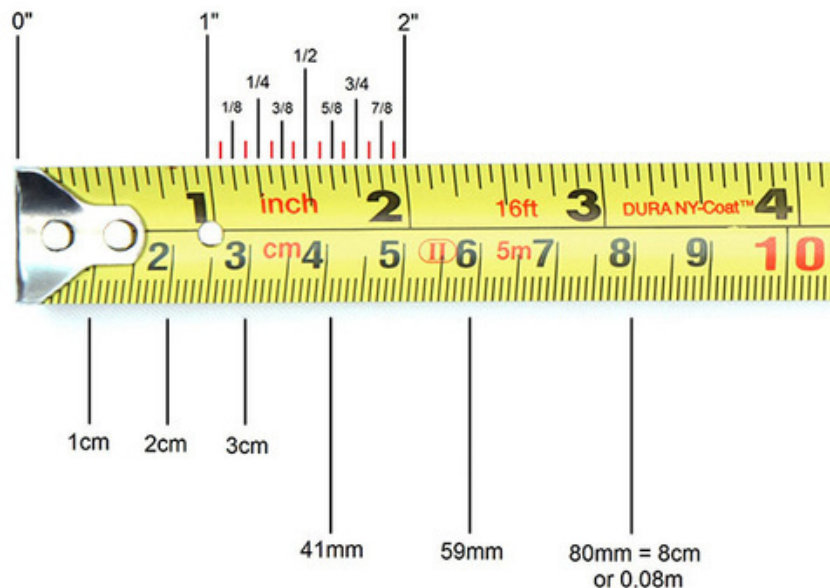

TOOLS YOU CAN USE:

Tape Measure (classic and reliable)

Laser Measurer (very accurate, great for one-person jobs)

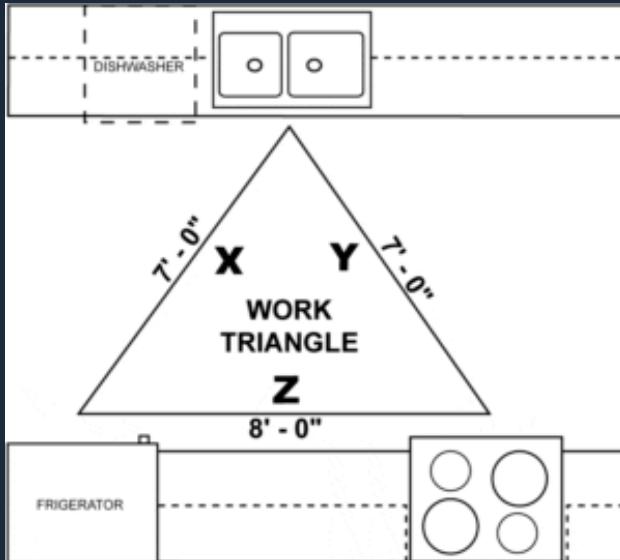

Measuring App (Measure App (iPhone – built-in) - (AR Ruler App (Android) – Use your phone to scan and measure rooms

How to Read a Tape Measure

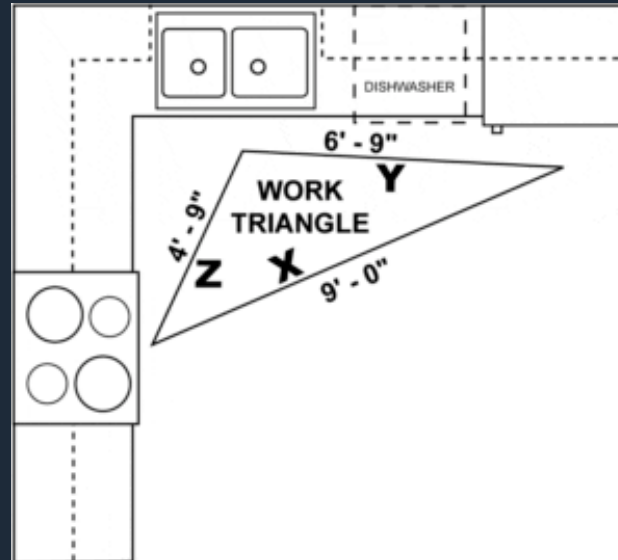

BONUS TIP: MEASURE THE "WORK TRIANGLE"

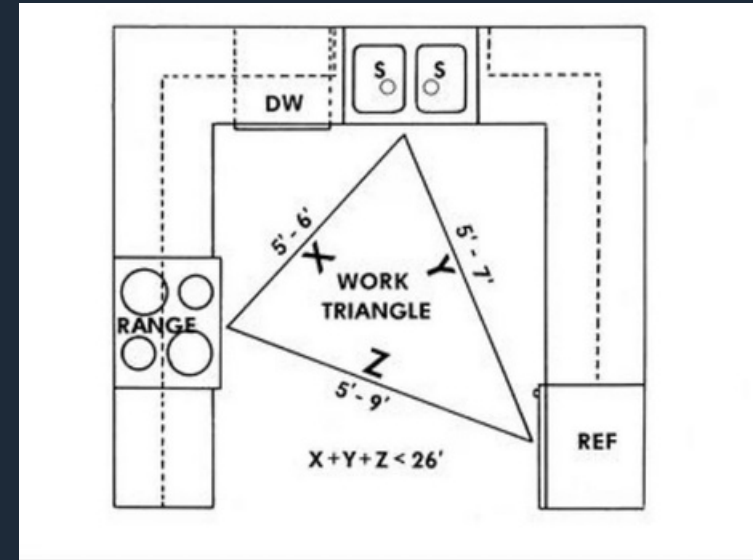

This means measuring the distance between your sink, stove, and refrigerator—the three main work areas in your kitchen. Keeping these areas within a comfortable walking distance (ideally between 4 and 9 feet apart) helps make your kitchen more efficient and easier to cook in.
